

IL | Introduction

IL is an engineering and consulting company that devises, design and develops various technological solutions for industrial, scientific, and educational purposes. We are located in Tartu, Estonia. Most of our solutions have been designed individually for specific customers – system requirements are developed in dialogue between our clients and engineers. Our services include information technology, electronics, mechanics and automation; our ideals are quality, flexibility and competence. Our aim is to find the balance between new innovative technologies and solid traditional systems. We are convinced that the introduction of new technologies should first increase profitability, not to be a goal in itself.
